

Safe Processes by applying detectable O-rings

Detekt-O-ring (for pressure transmitter)

Detectable sealings for the food and life science industries

Features

- hygienic design in acc. with FDA; 3A and EU1935/2004
- for liquid, dry, oil- and fat-containing products
- O-rings for pressure transmitter available in FKM or EPDM
- suitable for operating temp. from -20°C to +200°C (FKM) and for CIP/ SIP
- product and process safety due to detectability of detached elastomer particles by metal-detectors
- particle detection for as little as 2mm

- prevention of product contamination by detached elastomer particles results in avoidance of expensive and defamatory product recalls

Applications

- suitable for all applications in the food and life science industries v.a.
- dairies
- breweries
- beverage producer
- food producer
- food processor
- fermenter
