

Resistance Thermometer with integrated display TEMA

for the food and beverage industry

Display TEMA

for resistance thermometers

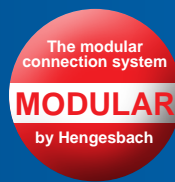

Features

- TEMA may be combined with different types of thermometers (e.g. TP16, TP60, TP70)
- integrated red display with status LEDs
- easy operation using 3 keys
- menu operated setting of the measuring range between -50...+200°C, min. measuring span 10 °C
- reading in °C or °F
- enhanced sustainability by
 - ▶ reduction of inventory costs
 - ▶ increase of system availability
 - ▶ low life cycle costs by smart electronics
 - ▶ short response times due to an optimized design for precise process control
 - ▶ significant reduction of cleaning costs
 - ▶ elimination of contamination risks for humans and product
- high-quality sensor technology
- dismantling of the device without interference with the process, simplifies calibration of CCP's
- additional option: vibration-resistant measuring inserts

Applications

- temperature measurement in tanks and pipes, e.g. UHT, heat exchanger, cooling processes, ...
